CORE COMPETENCIES

TBA Machine is a versatile machine shop with capabilities that range from prototyping, 3D scanning, reverse engineering, CAD modeling, to full production manufacturing. We pride ourselves on our ability to meet, and exceed, each of our customers' expectations.

Capabilities:

- Mill turn centers capable of up to 4 axes
- Vertical Milling Centers capable of up to 5 axes
- Wire EDM up to 4 axes
- Laser engraving
- Utilizing a Hexagon 7 axis PCMM for inspection, inspection reports, and laser surface scanning
- Anodizing
- Solidworks
- Geomagic
- Mastercam
- FFL
- SOT

PAST PERFORMANCE

Speed Clips, value \$45,855.98, duration 45 days. We created a negative model from the CAD that the customer provided, adjust the tolerances, created injection points, and milled an injection mold for production.

Contact: Randy Franks, owner, 1-804-937-3801, RandyFranks1@gmail.com

Ripatuned, value \$32,500, recurring in 6-week intervals. Initially we modeled and created prototypes for this customer until he decided on a final form. We now turn, groove, drill, bore, mill, inspect, and private label 100 units on a reoccurring basis to maintain their inventory.

Contact: Steven Ripa, owner, 1-908-361-3616, Thehellcatdoctor@gmail.com

DIFFERENTIATORS

We have invested the time and effort to expand our companies' capabilities to eliminate most situations where a third party would have to be involved. An example of this is our capability to anodize which reduces delivery time by as much as 3 weeks when compared to shops that must outsource.

Our customers have chosen us over our competition because of our strict inspection policies and ability to deliver on time, every time. This ensures that all parts ship from our facility on time and meet every specified tolerance.

We stand by all the products that we create and maintain open communication to resolve any questions or concerns that may arise.

COMPANY DATA

Founded in 1996, TBA Machine is a professional machine shop that can take a project from the early idea formation stage, through the modeling/testing phases, and then support the production phase without having to involve outside resources. This allows for process streamlining, eliminating delays, and consistently meeting our customers operational goals and expectations.
